**SWINE INFLUENZA ON THE RISE**

May 3rd, 2009 – Given the numerous news stories of increasing cases of swine flu specifically in the United States, and the announcement by the U.S. Department of Health and Human Services that swine influenza is now a public health emergency in the United States (<http://www.hhs.gov/news/press/2009pres/04/20090426a.html>), Microflex® Corporation (Lake Forest, IL), a division of BarrierSafe Solutions International® (BSSI), a leading provider of latex and synthetic hand protection, is providing the following recommendations from the Centers for Disease Control & Prevention.

There are everyday actions that can help prevent the spread of germs that cause respiratory illnesses like influenza. Take these everyday steps to protect your health:

- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it.
- Wash your hands often with soap and water, especially after you cough or sneeze. Alcohol-based hand cleaners are also effective.
- Avoid touching your eyes, nose or mouth. Germs spread this way.
- Try to avoid close contact with sick people.
- If you get sick with influenza, CDC recommends staying home from work or school and limiting contact with others to keep from infecting them.

More information on swine influenza can be found at CDC's website.
